## What's in the box

1 x 7W Solar Panel

1 x Solar Panel Mounting Bracket and Hardware

1 x Battery Box (Battery Included) and Mounting hardware

1 x 12ft Power Cable

4 x Lag bolts

Image 1

## Getting Started

1. Attach the Solar Panel to the Mounting Bracket using the provided hardware (See Image 1).
2. Mount the Solar Panel bracket and battery box in your desired location. The solar panel and battery box can be mounted to a wooden post, T-post, or fence post. If you are using a T-post you may have to pre-drill holes for the battery box. (As a general rule you should mount the solar panel facing South).
3. Connect the Solar Panel wire to the battery box. The connectors on the battery box should face down (see image 2).
4. Plug your camera into the battery box using the provided power cable.

\*\*If you are using a security enclosure you will need to turn the power switch on before placing the camera in the security enclosure. Plug in the power cable after the camera is installed in the security enclosure.

\*\*\*You can run Energizer Ultimate Lithium batteries in the camera while its plugged into the Solar Power Unit. The batteries will act as a backup. The camera will automatically use the best power source.
