

# Controller for LED Illumination

# **VLC-1230-4**

# **Operation Manual**

Thank you for purchasing a VAL product.

To use this LED controller with optimum performance and safety, please read this manual thoroughly before starting operation.

Keep this manual for the whole product lifetime.

The following warning symbols are used in this manual. Be sure to fully understand the contents.

⚠ WARNING	A warning denotes a hazard that can cause severe injury or death.
⚠ CAUTION	A caution denotes a hazard that can cause injury or damage of equipment.

# 1. Safety regulations

# WARNING Do not open the chassis to avoid electric shock. High-voltage parts are inside. Use appropriate DC power only. 1) DC12V: Input terminal board of the controller M3 terminal board. Crimp Terminal on the connected side M3 round crimp terminal. Earth ground the product. If you do not, it may cause an electric shock when you touch both a part with earthing potential and the power supply at the same time. Whenever trouble occurs, such as smoke, smell, noise or abnormal heat, stop the operation immediately and turn off the power and unplug the power cord. Use only LED lighting unit made by VS Technology (Thailand) Co., Ltd. If you use with other lighting unit, over current may cause a fire or heat.

# **A** CAUTION

- 1. USE the extension or remote cables 3m maximum to prevent power drop by voltage reduction or malfunction by noise.
- 2. Installation of the product
  - 1) Place horizontally in a well ventilated space on the rubber feet at the bottom of the unit.
  - 2) Do not topple or lay on its side.
  - 3) Do not put on unstable or vibrational place.
  - 4) Do not use in environment with humidity, dusty, high temperature or fire.
  - 5) Keep liquids away.
- 3. Do not look at the LED directly.

If you see the LED long time, your eyes may be damaged.

4. Cleaning

Use wet cloth twisted well.

Never use inflammable liquids such as alcohol, benzene or thinner.

Turn off the power and unplug the cord from the outlet while cleaning to avoid any injury or damage of the unit.

5. Dispose the product conforming to the law in the region where the product is used.

# 2. General Description

VLC-1230-4 are a controller for VAL series or LED lighting unit made by VS Technology (Thailand) Co., Ltd. It can be used with input voltage range with DC12V and output wattage maximum totally 30W with 1CH and 2CH and 3CH and 4CH. There are four independent output channels and each channels can be controlled separately. Remote control is also available separately in each channels.

# 5. Dimensions and Functions

1	Intensity Volume Knob	For digital control
2	Digital Display	Display the setting of the light intensity or the setting of the lighting mode.
3	Channel Selection Switch	Selects CH1, CH2, CH3, CH4.
		CH1 lit: Lit when changing settings for Light Unit connected to output connector CH1.
<b>4</b> )	Channel Indicators	CH2 lit: Lit when changing settings for Light Unit connected to output connector CH2.
4	Charmet Indicators	CH3 lit: Lit when changing settings for Light Unit connected to output connector CH3.
		CH4 lit: Lit when changing settings for Light Unit connected to output connector CH4.
5	Control Switch	Selects internal (INT.) or external (EXT.) control mode.
6	Mode Switch	Selects normal (NOR.) or strobe (STR.) control mode.
7	Trigger H/L Logic Switch	Selects the logic of the trigger signal.
8	External Control Connector	For external control with RS-232C communications.
9	External Triangu Innut Connector	Inputs the ON/OFF signal for ON/OFF Mode.
9	External Trigger Input Connector	Inputs the trigger signal for Strobe Mode.
10	Output Connectors	Supply power to the Light Units.
11)	Input Terminal Block	Connects the power source to the Control Unit DC12V.

# 6. Operation

### (1) Connections

Connect the LED lighting unit to CH1 or CH2 or CH3 or CH4 output connector on front panel of the product. Connect DC power cord to input terminal block on front panel of the product.

# (2) Internal control

Light intensity is adjustable manually when the control switch on the front panel is set at "INT."

### (3) External control

When the control switch on front panel is set at "EXT.", external control input signal is available through "RS-232C" or "TRIG. IN" connector on front panel.

### (4) On/Off Control

It is possible to turn off the light by inputting "off" signal by External control mode.

### (5) Error Signal

Error indicator on front panel will be on if an error of LED lighting unit detected such as breaking of wire. Error signal from external signal connector will be output at the same time.

It does not identify error of CH1 or CH2 or CH3 or CH4. Please check the lighting units.

This function does not detect the connection of lighting unit. To avoid signal malfunction, set the output minimum level if the lighting unit is not connected.

This function works regardless of the control switch ("INT./EXT." mode).

# 7. Control with External Signals

Use output signal cable of 3m or shorter.

Do not apply too high current and voltage.

Do not use external connector except SELV circuit with reinforced insulation or a circuit with double insulation.

## **Connector Communications Specifications**

No.	Signal
1	Tx
2	Rx
3	NC
4	GND

Communications protocol	EIA-232-D
Baud rate	38,400 bps
Data bit length	8 bits
Parity bit	None
Stop bits	1 bit

### **Command Formats**

### Send Data (\*1)

Function	Header	Channel specification		Sent command	ID	Checksum	Delimiter	Default
FUNGLION	Heauer		Instruction	Data (*2)	specification	OHECKSUM	Delimiter	Deraurt
Light Intensity Setting		00 to 03	F	000 to 255 (000:Min. Intensity, 255:Max. Intensity)	00 (Fixed)	00 to FF		000
Lighting Mode Setting	@	(Refer toChannel Specification)	S	01 to 10 (Refer to Lighting Mode Settings)	OO (Fixed)	(Refer to Checksum)	<cr><lf></lf></cr>	00
ON/OFF Setting (*3)		FF: All channels (ON/OFF setting only)	L	0 : Not Lit , 1 : Lit (*4)		GIEGKSUIII)		(*5)

- \*1: Send a data within 4 seconds from 'Header' to 'Delimiter', otherwise time-out error occurs and command data will be rejected.
- \*2: Specify all numbers in Decimal format.
- \*3: ON/OFF settings from EIA-232-D communications without regards to trigger logic switch, turned OFF at '0' and ON at '1'. ON/OFF setting will not be held after turning the power off.
- \*4: When operating EIA-232-D Communications and trigger signal input at same time in ON/OFF mode.

  When Trigger H/L logic switach is at H: if either controls setting to OFF setting, Light unit will be turned OFF.

  When Trigger H/L logic switach is at L: if either controls setting to ON setting, Light unit will be turned ON.
- \*5: Defalt setting for trigger logic switch is H = 10N and L=00FF).

# Receive Data

RECEIVE DALA									
F	11	Ohannal anaa: <b>6</b> : aa <b>h</b> : an			Recei	ID	01 1	D. 11

ASCII (hexadecimal)	40 hex	30 hex	31 hex	46 hex	31 hex	32 hex	35 hex	30 hex	30 hex	1DF hex

\*Set value that are higher than 10 are not valid.

# **Setting Procedure**

- -Make sure that the main power source is turned ON.
- -Set the Internal/External mode selector to EXT. to set External mode.
- -Setting the Light Intensity

Specify the ID and the channel, and the light intensity.

Setting example	Send data	Receive data(When ON)	Receive data(When NG)
Setting the light intensity	@01F07500E4CRLF	@0100051CRLF	@01N0300B3CRLF
to 75 for CH2 of the VLC-			
1230-4 that has the ID set			
to 01			

# -Setting the Lighting Mode

Specify the ID and channel, and set the lighting mode.

Setting example	Send data	Receive data(When ON)	Receive data(When NG)
Setting the lighting mode	@00S0400B8CRLF	@0000050CRLF	@00N0300B2CRLF
to Strobe Mode at $200 \mu$ s			
for CH2 of the VLC-1230-4			
that the ID set to 00.			

# -To set ON/OFF Signal in ON/OFF mode

Specify the ID and the channel, and set ON/OFF signal.

Setting example	Send data	Receive data(When ON)	Receive data(When NG)
To turn all light units OFF	@FFL000A8CRLF	@FF007BCRLF	@FFN0300DDCRLF
of the VLC-1230-4 that has			(When there is a set value
the ID set to FF.			out of range error)

# 8. Inputting an External Trigger

# \*Input Signal and Photo coupler

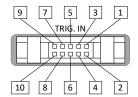

The input signal from the external trigger input connector can be used to control the photo coupler inside the Unit to turn the LED Light Units ON and OFF or to control strobe timing.

Trigger H/L	Input signal	Photo coupler	ON/OFF Mode	Strobe Mode
Logic Switch				
Н	HIGH	0FF	Light Units ON	Lights Units ON for the set time
	LOW	ON	Light Units OFF	No change
L	HIGH	0FF	Light Units OFF	No change
	LOW	ON	Light Units ON	Lights Units ON for the set time

<sup>\*</sup>When operating trigger signal input and communication used External trigger input connector at same time in ON/OFF mode.

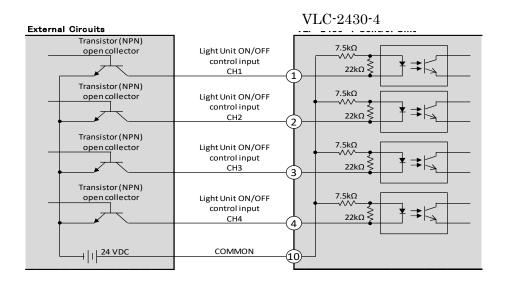

# \*Connector Layout

# External Trigger Input Connector Plug

NO	Signal	Cable	
		Wire color	
1	Light Unit ON/OFF control input CH1	Black	
2	Light Unit ON/OFF control input CH2	Black/White	
3	Light Unit ON/OFF control input CH3	Brown	
4	Light Unit ON/OFF control input CH4	BROWN/WHITE	
5 to 9	No used		
10	COMMON+	Yellow/Black	

# \*External Trigger Signal Connection Example

Signal Specifications					
Rated input voltage	Maximum input voltage	ON voltage/ON current	OFF voltage/OFF current	ON/OFF response time	Input impedance
24 VDC	26. 4 VDC	14.4 VDC min./3 mA max.	5 VDC max./1 mA max.	10 μs max.	7.5kΩ(per terminal)

When Trigger logic switch is at H: if either controls setting, Light unit will be turned OFF.

When Trigger logic switch is at L: if either controls setting, Light unit will be turned ON.

# \*Setting Procedures

With external trigger input connectors pins 1 to 4, select the channels (CH1 to CH2 to CH3 to CH4) where you want to input an external trigger, and input trigger.

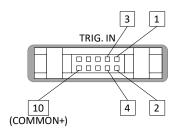

Trigger signals are input from the external trigger input connector in ON/OFF Mode and Strobe Mode in both Internal Mode or External Mode.

### ON/OFF Mode

The Light Units are turned ON or OFF according to the external trigger signal input.

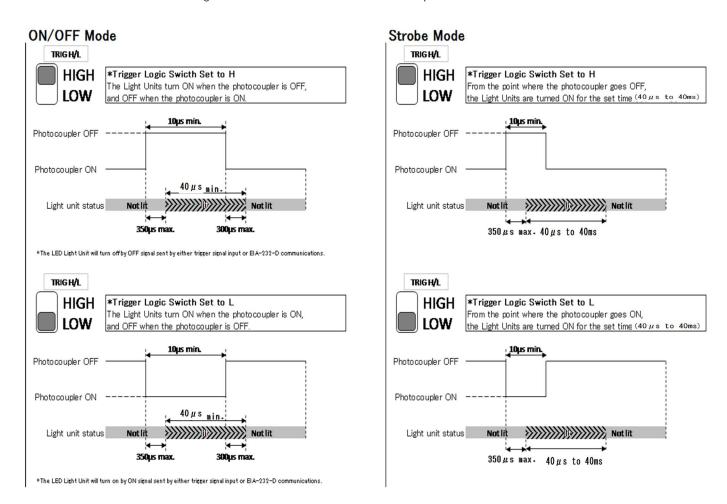

### Strobe Mode

The Light Units are turned ON for the set time after the external trigger signal input.

# \*Trigger Input Sequence Diagram

- A pulse width of ON signal shall be  $10\,\mu$ s or more. The Light Units will be turned on for at least  $40\,\mu$ s, even when the input ON signal is less than  $40\,\mu$ s.
- If another trigger is input before the Light Units turns OFF in Strobe Mode, the starting point of the reentered trigger is taken as the start time and the strobe light continues for the set time from that point.

# 9. Optional Accessories

\*External Control Cable Model: VL-EXCB1-3

Connector: XN2A-1470 (Manufactured by OMRON)

\*External Trigger Input Cable

Model: VL-EXCB2-3

Connector: XG4M-1030-T (Manufactured by OMRON)

# 10. Warranty

### Duration of warrantv

The duration of the product warranty shall be two years from the day of product delivery.

### Extent of warranty

If a fault or defect attributable under normal use during the warranty period, VS Technology (Thailand) Co., Ltd. will in good faith ship a replacement or repair the defective part of the product free of charge.

- O Faults or damage that occur due to conditions, environments, handling, or usage other than those described in the Instruction Manual and specifications.
- O Faults or damage that occur due to modification of structure, performance, specifications, etc., by customers after the day of product delivery.
- O Faults or damage that occur due to use of the product other than for its designed purpose.
- O Faults or damage that occur due to natural or human causes such as saltwater air damage, gas damage, earthquakes, floods, fire, lighting or armed conflicts.

### Disclaimer

VS Technology (Thailand) Co., Ltd. shall not be responsible for any appendant damaged for example business interests cost or abort of business.

### ≪Note≫

•If there are any unclear points or if you have any questions, please feel free to inquire VS Technology (Thailand) Co., Ltd.

For repair or after sales service, please contact any VS Technology (Thailand) Co., Ltd. office or the sales representative where you have purchased the unit.
